

Alternative Tooling Sourcing Leads to Increased Productivity

Opportunity

It is not uncommon to see mature manufacturing facilities struggle with cutting tools that over the years have become obsolete, resulting in long lead times and inflated prices. Vallen Integrated Supply can take advantage of its broad portfolio of suppliers to identify new technologies and/or alternative products to help our suppliers mitigate these issues. Vallen was able to help one of our hydraulics customers facing this same scenario with its cutting tools.

Solutions

We facilitated the data exchange between our customer and supplier to start applying reverse engineering to produce a brand-new cutting tool. There were multiple sessions with the customer's engineering department to review the new design to ensure that all tolerances were being met. The supplier was also known in the aerospace industry for having a special technology that had resulted in productivity improvements in other cutting tools. They were able to combine that technology along with the customer's tolerance needs to deliver a new cutting tool at a more competitive price and better life span.

Streamline Your Supply Chain Processes

You can rely on Vallen Integrated Supply's specialized teams to pool their expertise and solve your most important challenges. Our unique skills and experience enable us to build creative, impactful solutions that streamline the indirect supply chain process, eliminate waste and increase cost savings onsite.

- Improve sourcing management
- Eliminate system investments
- Optimize inventory
- Lower labor and materials costs
- Productivity improvement

Savings Summary

- Improved tool life and price point
- 50% productivity improvement
- Mitigation of future stock outs
- Significant cost savings on an annual basis
